Find your first 10 users

Treat ten users as a reachable experiment target, not a promise. Begin with people who experience the specific problem.

Day 1 / choose one reachable audience

Write the user group and the situation where the problem appears. Choose one channel where those people already talk. Read its rules. List 15-20 relevant people you can contact respectfully; a small list is enough to start.

Day 2 / prepare one clear invitation

Hi [name], I am building a small tool for [specific task]. I noticed you mentioned [relevant problem]. Could I ask how you handle it today? If it is relevant, I can share a short demo. No problem if now is not a good time.

Days 3-4 / share the useful result

Show a short demo with a realistic input and the output. Say who it is for, what it does today, and what is unfinished. Invite a short trial. Avoid exaggerated earnings claims or a long feature list.

Days 5-6 / help people finish the task

Watch the first few users try it. Record useful-task completions, blockers, and voluntary follow-ups. Ask one simple question: "What would make this worth using again?" Do not use the number of compliments as your conversion metric.

Day 7 / review the experiment

Count invitations, replies, trials started, tasks completed, and repeat use. If there are few replies, revise the audience or invitation. If trials fail, fix the workflow. If people succeed but do not return, revisit the problem frequency.

WORKSHEET / LAUNCH & GROW

A tiny experiment tracker

Record the numbers honestly. Choose your success threshold before you see the result.

Target user / recurring problem / channel

_____
_____

My useful result and trial invitation

_____
_____
_____

Target: invitations __ replies __ trials __ completed tasks __ repeat users __

_____
_____

Actual: invitations __ replies __ trials __ completed tasks __ repeat users __

_____
_____

What people said and where they got stuck

_____
_____
_____

Continue / change the audience / change the workflow / stop

_____

A respectful follow-up

Hi [name], one quick follow-up on [task]. Did you get a chance to try it? If it was not useful or the timing was wrong, that is helpful to know too. Thanks for taking a look.
